

Quality Measure & Interoperability Solutions

We're not newbies. For nearly 20 years we've been providing healthcare information technology solutions. Headquartered in New Orleans, our team has advanced expertise in HITECH certification and software development for Meaningful Use and MIPS/QPP.

Dynamic Health IT technology benefits healthcare providers and vendors. We specialize in eCQMs, ONC certified solutions and system interoperability via standards such as HL7, Clinical Document Architecture (CDA), CCDA and FHIR.

Our Products:

- CQMsolution
- ConnectEHR
- Patient Portal
- Dynamic FHIR API
- The Interface Engine

www.DynamicHealthIT.com

New Orleans, Louisiana

(504) 309-9103

- Certified to support the latest version of all eCQMs
- Supports expanding list of MIPS measures for Eligible Clinicians
- Import from QRDA I or vendor-supplied data using variety of methods, including API
- Generates outputs for MU, IQR, MIPS/QPP and Joint Commission
- Visual dashboards for viewing measure progress
- Patient drill-down screens shows how patient meets measure logic
- CMS Qualified Registry & Joint Commission ORYX® vendor for eCQMs

- Modularly certified for 2015 Edition CEHRT, meets MU and MACRA requirements.
- Creates, receives and parses XML-based Clinical Documents, including (but not limited to) CCD, CCDA and CCR
- Creates, receives and parses HL7 messages required for MU, including Public Health, Immunization and Lab results
- Certified for Direct Protocol, ConnectEHR integrates with our preferred vendor MaxMD, or any HISP

- Enables patients to View, Download and Transmit clinical documents
- Secure Messaging between provider and patient for EP and EH
- Automatically triggers activation and reminder emails to patient
- Enables provider to load CCDAs into the portal via File or Direct with user-friendly display.
- Rapid implementation; patient email address not required
- Provides Utilization Reporting for MU/MIPS
- Patient can select Spanish or other language

- The API provides leading-edge interoperability while meeting ONC 2015 EHR certification requirements 170.315(g)(7-9).
- Makes Common Clinical Dataset EHR data readily available using common web standards, including XML and JSON.
- Can be reached through a RESTful protocol in which each FHIR resource has known URL
- Data is populated via receipt of a version 2.1 CCDA and secured using the HIPAA-compliant OATH standard

- Turnkey HL7 & Clinical Document Architecture solutions for CCD and CCDA
- Intuitive easy to use, browser-based user interface
- Very affordable but outstanding message throughput & scalability
- Easy to map & transform messages through HL7 & Clinical Document objects using VBScript or JavaScript
